

SUPERSCENT

Powerful solution for odor problems

extreme air products

No more odor nuisance

The Superscent is a very powerful solution for various odor problems. Whether it concerns sweat odors, nuisance caused by incontinence material or smoke smell, the Superscent tackles it effectively

The Superscent can be used in many ways. As a permanent application, you can think of places like a changing room or a large cloakroom, or in the immediate vicinity of a smoking room. But, of course, it is also possible to apply the Superscent where needed, since it is easy to (re)place. In hotels, for example, it is used to refresh hotel rooms

The Superscent uses dry mist technology to spread the odor neutralization, so no waste and no mess with fillings. Controlled through an app, the operation can be set completely according to need. Schedules can be set and the intensity can also be determined. The Superscent can also be mounted in different ways and has a range of up to 560 m³. As a result, the Superscent offers the solution for odor nuisance in many different rooms and situations.

The Superscent can be used with two different types of odour neutralisation refills. Both basically work with the neutralising substance Metazene®, which breaks down odour particles at the molecular level.

Firstly, there is the option of placing odour cubes in the Superscent. Between 4 and 8 cubes can be placed at a time. These fragrance cubes not only neutralise, but also spread a refreshing scent. Some fragrance options are lavender, white tea or sea breeze.

The other neutralising refills are the cartouche neutral and the cartouche smoke end. These are suitable for dealing with severe odour problems. The cartouche neutral is specially designed to tackle organic odours, such as sweat, urine and mould/moisture. The smoke end cartridge deals with nuisances caused by smoke.

These powerful cartridges are also available with added aromas if required. This makes the Superscent not only a neutraliser, but also suitable for scent marketing.

The big advantage of odour neutralisation is that the annoying smell is not masked, but actually eliminated. Thereby, a fresh smell is essential for a good experience of customers and staff. The fragrance cubes have a shelf life of about 30 days and the cartridges last for 2 months with permanent use.

TECHNICAL SPECIFICATIONS

Mains voltage	230V / 50Hz	Color	black
Space advice	40 - 210 m ²	Weight	2 kg
Operation	Continuously adjustable, through app on mobile	Dimensions	285 x 100 x 120 mm (lwxhx)
Noise	30-40 dBa	Warranty	1 year
Casing	plastic	Norm	CE
