

# XOZ500

Ozone generator

# Efficient odour removal

Our health and well-being depend heavily on the quality of the air we breathe. Pollutants, such as allergens and chemicals, can have harmful effects on our health. Bad odours also have a direct impact on our well-being. These odours are often difficult to resolve, no matter how much cleaning is done. In addition, many people are allergic to the chemicals in cleaning products. Ozone cleaning offers a good solution

The XOZ500 is a professional ozone generator used for efficiently removing odours in e.g. a hotel room or boat. These include unpleasant odours such as smoke, moisture and mould, but also, for example, the smell of pets or sweat. Ozone is a clean, natural way to remove odours. Ozone oxidises organic material, such as micro-organisms and odour molecules, which are thus eliminated once and for all.

The XOZ500 uses an ozone tube in which high voltage converts oxygen molecules (O<sub>2</sub>) from the air into ozone (O<sub>3</sub>). AXP's durable ozone tube technology offers several advantages, such as efficient ozone production, long service life and the possibility of connecting a hose. The latter makes it possible to treat hard-to-reach areas. E.g., a car ventilation system or a grease trap in a kitchen.

The XOZ500 can be used for both one-off room cleaning and permanent applications. The ozone generator can be easily mounted on the wall.

Permanent application is possible e.g. in waste rooms or when connected to a grease separator. High concentrations of ozone are harmful to humans and animals and must therefore be used with appropriate precautions. With the XOZ500, brief access to the room (up to max. 5 minutes) is within the standards.

When you start working with an ozone generator, it is very important to follow the instructions carefully. It is a clean and safe way to clean a room, provided you work with it in the right way. Fortunately, ozone has a strong smell, which you can smell even before a harmful concentration of ozone is present.

With the XOZ500, you are assured of a robust, efficient and safe ozone generator manufactured in Sweden by a member of the European Ozone Association (EUOTA).

# XOZ500

## TECHNICAL SPECIFICATIONS

Main voltage	100-230V	Mounting	Standing/wall
Max. power consumption	20W	Dimensions (hxwx d)	160 x 180 x 270 mm
Air capacity	116 m <sup>3</sup> / hour	Casing	Stainless steel
Ozon production	Max. 500 mg/hour	Weight	3 kg
Technique	Ozone tube	Hose connection	yes
Operation	Digital with timer	Warranty	2 years
